x3ntaur : smart factory ready to use

X3ntaur gathers over 20 years of experience designing cutting edge technologies and algorithms for supply chain optimization across all industries.

As digital industries emerge around the world businesses seek how to leverage their factories beyond ERPs and spreadsheets and into harnessing the full power of mobile sensors, flexible process automations and digital integration.

X3ntaur is the digital nervous system that links and synchronizes all your factory areas by automating processes, alerts and directives enabling multiple devices and sensors to control intelligent traffic and execution in real time.

A collection of advanced factory softwares merged into one online platform

APS, MRP, MES, SPC, RFID, BARCODEs.. with so many different products out there serving the needs of manufacturers and technology moving so fast, how can factories know which pieces to use next? And how to link all these systems together?

Advanced systems have been evolving for years next to ERPs, but now you don't have to spend millions by trying to figure them all and wiring them together. X3ntaur brings all the wizardry linked and ready to use in an intuitive online supply chain platform.
